BRAND MARK · USAGE GUIDELINES · v1

The mark: “The Cut Stone”

Amber is a gemstone. The mark takes that literally: a faceted stone rendered as three flat planes of one color family, catching light the way a real cut gem does. It carries no letterform, so it works as a pure icon — app tile, favicon, a stamp on a card — without needing a wordmark alongside it to explain what it is.

Clear space

Keep a margin equal to half the mark's width free on every side — no text, edge, or other logo inside that zone.

Minimum size

16px digital / 8mm print.

Below that, drop the internal facet lines and use the solid silhouette.

Do

- Use the dark-tile version as the default app icon.
- Use the solid white/navy version on photos or busy backgrounds.
- Keep the three facet tones in the order shown — light / mid / dark, left to right.

Don't

- Recolor the facets outside the palette on page 3.
- Add a drop shadow, glow, bevel, or outer stroke of your own.
- Stretch it — the gem is only correct at 1:1 width-height.
- Rotate it. It's drawn to sit point-down; that's the mark.

Color palette

Ink (primary text / bg)
#0B0F1A

Gold — light facet
#E8C46B

Gold — mid facet
#C8940F

Gold — dark facet
#8F5F06

Paper (light tile bg)
#EFF1F5

Wordmark lockup

amberpay

Icon left, wordmark right, baseline-aligned — see lockup-horizontal.svg

Files in this package

/svg — vector masters: primary, dark/light tile, white, navy, stamp, outline, both lockups

/png — rasterized exports: app icons (96–1024px), transparent mark, solid variants, lockups

/favicon — favicon.ico (16/32/48/64) plus individual PNGs

Rebuild any size from the SVGs — they're the source of truth, not the PNGs.
